SOC 2 Type II Report Summary — FY2024 (SUPERSEDED)

SUPERSEDED — retained for history only

This is the summary of the FY2024 SOC 2 Type II report. It has been superseded by the FY2026 report issued 15 June 2026 and must not be cited as current evidence of the control environment. It is retained so that a customer holding the FY2024 report on file can reconcile what has changed. Any answer that relies on this document without also citing the current report is wrong.

Report identification

SOC 2 Type II report on the suitability of design and operating effectiveness of controls relevant to the Trust Services Criteria for Security and Availability. Report period 1 April 2023 to 31 March 2024. Issued 30 June 2024 by an independent CPA firm. The report was valid for reliance until 30 June 2025 under the customary twelve-month reliance convention.

Scope differences against the current report

The FY2024 report differs from the FY2026 report in three material respects. First, Confidentiality was not in scope in FY2024; it was added in FY2026. Second, the tenant administration plane was assessed as a single component in FY2024, whereas FY2026 assesses the administration plane and the key management plane separately. Third, the recipient portal was in scope in both periods, but the interoperable gateway-to-gateway delivery path was introduced after the FY2024 period and is therefore covered only by the FY2026 report.

Control activities as tested in FY2024

Criterion	Control activity	Result
CC6.1	Access to production requires federated sign-in with a second factor.	No exceptions noted
CC6.7	Message content at rest is encrypted with AES-256-GCM.	No exceptions noted
CC7.2	Security-relevant events are centralised and retained for 365 days.	No exceptions noted
CC7.4	Confirmed incidents affecting a tenant are notified within 72 hours of confirmation.	No exceptions noted
A1.2	Each residency zone is served from two regions.	No exceptions noted

Why this document is still in the corpus

Superseded evidence is the single largest source of wrong questionnaire answers. Removing it from the corpus entirely would hide the problem rather than solve it: a reviewer who has the old report in their own files will still ask about it. It is retained here with an expiry already in the past so that the pipeline treats it as expired evidence, marks any citation of it accordingly, and prefers the current

report against the same question.
